

Brand Name	ISA®-NiFe 126 *		
Material Code	acc. ASTM B267 Alloy class 8		
Abbreviation	NiFe28		
Chemical Composition (mass components) in %. Average values of alloy components			
Ni Rem.	Fe 28	Mn 0.5	

Features and Application Notes

ISA®-NiFe 126 is well known for having a high temperature coefficient at a relatively high resistivity. Up to +610 °C, this alloy is ferromagnetic. It is mainly used in wire form for temperature-dependent resistors. Also for shielded resistors for spark-plug connectors as well as self-regulating heaters. The maximum working temperature in air is +600 °C.

Form of Delivery

ISA®-NiFe 126 is supplied in the form of round wires in the range 0.02 to 0.25 mm Ø in bare or enamelled condition and also in the form of stranded wires.

Electrical Resistance in Annealed Condition

Temperature coefficient of electrical resistance between

Electrical resistivity in: $\mu\Omega \times \text{cm}$ (first line) and Ω/CMF (second line)

650	94,250	≈ 8	≈ 15	≈ 20	≥ 20	≥ 30

Notes on Treatment // ISA®-NiFe 126 can easily be spot-welded. Under certain conditions it can also be soldered and brazed (see Technical Information).

Special Remarks on the Temperature Coefficient // The variation of the electrical resistance vs. temperature in the range between -100 and +500 °C, referred to 0 °C, is shown in graph 1.

1) This value applies to wires of 0.5 mm diameter. For thinner wires the minimum values will substantially increase, depending on the dimensions.

* Formerly NiFe28
